

POLYnnovation

making it work in plastics

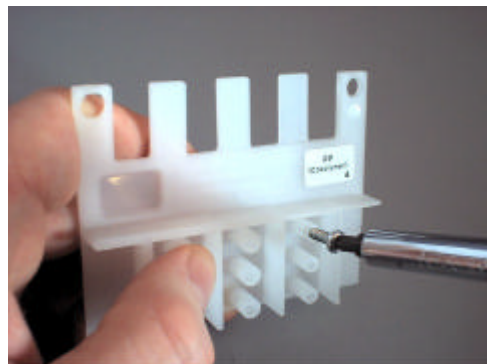

The POLYnnovation consultancy can offer professional and effective support in the following areas and relating to most plastics processing methods:

- Component design & audit
- Application development & implementation
- Part problem avoidance and/or rescue
- Post-moulding processes including assembly and marking/decorating
- Material & process selection
- Tooling specification & procurement
- Machine specification & procurement
- Project team creation/management
- Technical authoring & proofreading
- New technology introduction
- Expert witness service in component design issues
- Training & lecturing, including creation of memorable PowerPoint presentations
- Sourcing of ancillary equipment and services such as testing, FEA, process simulation

rather than simple test bars. Each material is described on an easy-to-understand generic data sheet. There is also a comprehensive glossary, covering many everyday terms used in the injection moulding industry.

POLYnnovation is the sole distributor of the highly-acclaimed “Back-to-Basics” material selection system, which allows the user to compare and contrast different plastics simply and easily. Each of the three volumes includes samples of six thermoplastics, in the form of the “Euro Testpiece.” This contains many features and finishes found in actual components,

Euro-Testpiece® - includes screw bosses and other common design features
